ABSTRACT

This white paper gives guidance to manufacturers and users on CE marking requirements for power supplies.

Relevant EC Directives are listed with their current status and a short description of their scope as applied to power supplies.

The applicability of the different directives to different power supply types, ‘stand-alone’ and ‘built-in’ or ‘component’ is listed with clarification of how the different directives treat the different types. A list of harmonized standards is given.

Physical marking and documentation requirements are detailed along with the legal responsibilities and obligations of manufacturers, representatives, importers and distributors.

References are given for ‘decision tree’ guidelines for the WEEE and RoHS directives published by the EPSMA
